Art Unit: 3728

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. § 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -(b) the invention was patented or described in a printed
publication in this or a foreign country or in public use
or on sale in this country, more than one year prior to
the date of application for patent in the United States.

-2-

2. Claims 1, 4, 8-11 and 13-18 are rejected under 35 U.S.C. § 102(b) as being anticipated by Trewella et al (3,338,019). In the reference of Trewella et al there is provided absorbent articles at the sterile surgical dressing/sponges 24/48/63/70. The articles are stacked (Fig. 3). In addition there is provided a package 11,12 which contains the stacked articles. The package is made of flexible sheet materials and therefore includes a flexible pocket. A flap of the package is provided by sheet 12,17 (or 55 or 65). The flap is releasably closed over the opening of the flexible pocket by seal lines 13 and 25 (or 59 or 68), which may be either heat seal or adhesive seal lines. The seal line 13,59,68 is spaced from the distal edge of the flap. This apparently permits the portion 17 to be grasped for opening the package (see Fig. 4). Although the lateral edges (25) of the flap portion 17 may also be sealed, the reference also describes an embodiment in which they are not sealed (see Fig. 9). The seal line (13) extends across the

' '

Art Unit: 3728

entire width of the package and therefore across the entire width of the flap.

-3-

Regarding claim 11 which calls for a two-sided adhesive tape, element 57 is adhesively attached to the portions of the package at opposite sides surfaces of the element 57 and therefore defines a two-sided adhesive tape. Accordingly, the flap 55 is adhesively attached by a two-sided adhesive tape over the opening of the flexible pocket 56,58.

Although the surgical sponges are disclosed as the articles packaged, such articles are capable of being used in the manner claimed by Applicant's claims 16-18 (although maybe not effectively as desired).

- 3. Claims 1, 4, 9, 14, 16 and 17 are rejected under 35 U.S.C. § 102(b) as being anticipated by Jones (3,557,853). The package/holder 10 of Jones includes a flexible pocket 12,14,16,18 closed by a flap 22 with an adhesive closure 24,25 (see col. 1, line 73 col. 2, line 2) which is spaced from a distal edge of the flap. The closure 24,25 defines an adhesive closure since each portion (24 or 25) is attached to the flap or pocket by adhesive. The package 10 is used for holding two sanitary napkins. Sanitary napkins are asserted to inherently function as panty liners.
- 4. The following is a quotation of 35 U.S.C.  $\S$  103(a) which forms the basis for all obviousness rejections set forth in this Office action:

A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious

Art Unit: 3728

at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

-4-

Claims 2, 3 and 5-7 are rejected under 35 U.S.C. § 103(a) 5. as being unpatentable over Trewella et al (3,338,019). Trewella et al disclose the general condition in which a flap of sufficient dimension is used for releasably closing a package and for being grasped so as to open said package. It has been held that discovering an optimum or workable value of a result effective variable/general condition involves only routine skill in the art. In re Boesch, 617 F.2d 272, 205 USPQ 215 (CCPA 1980). Moreover, a mere change in degree and not kind is obvious, absent an unexpected result. See <u>In re Aller</u>, 105 USPQ 233 (1955). The relative position between the distal edge of the flap 17 (or other flaps disclosed) and the adhesive seal line of Trewella et al is already indicated by the reference as Accordingly, to have made the spacing as a being spaced. particular value of dimension, including that claimed by Applicant, would have been obvious as being a difference is degree and not kind or as discovering a workable value of a general condition of grasping a flap for opening a package, already disclosed by Trewella et al.

Likewise, the reference of Trewella et al already discloses a seal line 13, and such a seal line indicated in Figure 4 would inherently include some width for providing an openable adhesive seal. To have made the seal width dimension with any particular value, including any of the values claimed by Applicant, would have therefore been obvious as being merely

Art Unit: 3728

a change in degree and not kind or as discovering a workable value for the general condition of releasable seal width that is taught by Trewella et al.

-5-

6. Claim 12 is rejected under 35 U.S.C. § 103(a) as being unpatentable over Trewella et al (3,338,019) in view of official notice that hot melt adhesive and its properties are known for sealing packages, wherein the sealing substance is permitted to be provided only at the seal instead of as a heat sealing packaging layer. The reference of Trewella et al suggests that the sealing of the disclosed package may be made by other conventional sealing techniques (col. 2, lines 54-57; col. 3, lines 3-7). Accordingly, it would have been obvious to have used any conventional sealing technique, including hot melt adhesive, for sealing the package of Trewella et al. And it would have been obvious to have done this where it is desired to apply the sealing substance only at the location of the seal instead of as a packaging layer.

7. For contacting the PTO by phone, the following contact numbers may be used:

For tracking of papers and association of papers with cases -- Customer Service. . . (703)306-5648

For matters regarding examination -- Examiner: Jim Foster . . . . . (703)308-1505

For faxing of correspondence:
